

Bluejay Elite 3000m splits, Shepherd 5-7-2021

Times from video.

So I think Wyatt told you. We had a FinishLynx camera setup and we were getting the signal but got an error message that said there was issues and it might mess up the times. We didn't want to risk the final times so unplugged that camera.

I put a video camera on the 200 mark so you should be able to see. I'll let you decide where to put the times and I have included the timecode.

The 3rd group of numbers is not hundredths, it is frames and there are 59.94 frames a second. Not sure how exact you'll want to get. But you could divide that number by 59.94 or 60 to get an accurate description.

The timecode is synced to the flash of the gun from the start of the video. The boys I missed the gun so I synced it from our scoreboard which starts on the gun. Also if you want us to put times in off of the video we can certainly do that too. Not really sure how accurate you are looking for.

Try to get the actual 3k split FAT next year and I also want to just leave the camera on so we can get 200 splits for everyone haha.—Carey Hammel

Times below are converted to hundredths by dividing by 60. Then rounded up. Will be rounded up further to hand times.
